

TUB DOCKING STATION

for Installing Freestanding Bathtubs

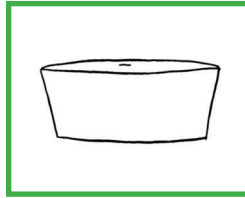

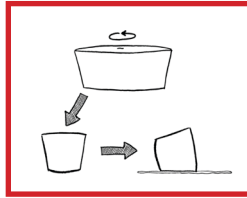

Installing a freestanding tub the traditional way isn't super complicated, but it is cumbersome and a lot can go wrong.

The Old Way

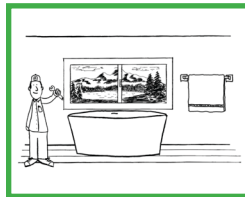

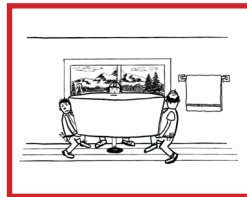

Docking Station Way

Must **tilt tub on side and lift** to connect tailpiece - **increases risk of scratches and cracks**

No tilting or lifting required to attach tailpiece before placing tub - **decreases risk of scratches and cracks**

High damage risk when **lifting and lowering tub to install**

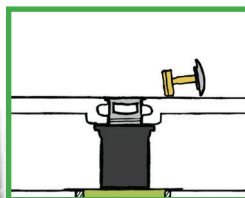

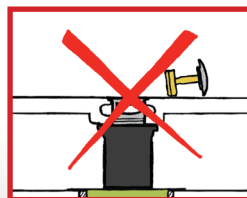

Low damage risk because **no lifting or lowering** required for tub installation

Lifting and lowering installation **requires more labor** and **adds cost** to project

Sliding tub into place to install **requires less labor** and **helps control cost** of project

Impossible to snake **without removing tub** completely to gain access

Removable clicker drain allows easy access **to snake drain and clear clogs**

EZ-Click™ drain is included and available in multiple finishes

In stock and ready to ship for you to provide customers this innovative solution to quickly and easily install freestanding bathtubs whenever they make a purchase!
